# Unveiling Market Insights: Analysing Spending Behaviour and Identifying Opportunities for Growth

October 7, 2023

## 1 INTRODUCTION

### 1.1 OVERVIEW

#### Project background and description

Wholesaling or distributing is the sale of goods or merchandise to retailer to industrial, commercial, institutional or other professional businessman to other wholesalers (wholesale businesses) and related subordinated services. In general, it is the sale of goods in bulk to anyone, either a person or an organization, other than the end consumer of that merchandise. Wholesaling is buying goods in bulk quantity, usually directly from the manufacturer or source, at a discounted rate. The retailer then sells the goods to the end consumer at a higher price making a profit.

The consumption and production of marketed food are spatially separated. Production is primarily in rural areas while consumption is mainly in urban areas.

## 1.2 PURPOSE

### Purpose of the wholesaling project

The primary purpose of wholesaling a Tableau project is to efficiently distribute and sell a comprehensive data visualization and analytics solution to other organizations or clients. This entails packaging the Tableau dashboards, reports, and associated data models into a marketable product that can address specific business needs or industry challenges. By doing so, businesses can capitalize on the demand for data-driven insights and empower other entities to make informed decisions based on their data. Wholesale Tableau projects can encompass a wide range of applications, from sales analytics and marketing performance tracking to financial reporting and operational optimization, ultimately delivering value and actionable insights to a broader customer base.

## 2 PROBLEM DEFINITION AND DESIGN THINKING
